TECHNICAL SKILLS

- **Proficient:** HTML, CSS, Javascript, ReactJS, Ruby on Rails, PostgreSQL, Git, NodeJS, Express, Mongo, Vite, Sqlite, PHP, Laravel, Docker, Redux, WordPress, TailwindCSS, Typescript, NextJS
- **Familiar:** Bootstrap, Axios, Netlify, Material UI, Stripe, Webflow, Firebase, Figma, Stripe

---

PROFESSIONAL EXPERIENCE

Upwork| Manila, Philippines (Remote)
FullStack Web Developer   Aug 2022 - Nov 2023
- **Frontend Architect:** Built responsive, high-performance web applications using React.js and WordPress, delivering optimized user experiences across multiple client projects
- **Agile Contributor:** Collaborated effectively within Agile development teams, contributing to sprint planning, daily standups, and iterative delivery cycles to meet project deadlines
- **Quality Advocate:** Strengthened code quality and team productivity through comprehensive code reviews, pair programming sessions, and knowledge sharing initiatives

Verity Intelligence| Petaling Jaya, Malaysia (Remote)
Software Developer   March 2024 - present
- **Platform Leadership:** Spearheaded the development of FITRecruit, a comprehensive ReactJS-based recruitment platform that streamlines end-to-end hiring workflows for HR teams and managers, reducing recruitment cycle time and improving candidate experience.
- **Advanced Form Architecture:** Engineered sophisticated form handling systems using Formik, implementing dynamic field generation, comprehensive validation schemas, and secure file upload functionality to optimize candidate data processing and application management.
- **UI/UX Excellence:** Enhanced user interface components through modular design principles and reusable component architecture, incorporating advanced features including intelligent error styling, contextual tooltips, and conditional rendering logic to improve user engagement and platform usability.
- **AI Integration Research:** Proactively researching and exploring practical AI implementations within the recruitment platform, focusing on automation of screening processes, enhanced user experience through intelligent recommendations, and data-driven decision-making capabilities to maintain competitive advantage.
- **Technical Innovation:** Contributed to platform scalability through modern React patterns, state management optimization, and performance enhancements that support growing user base and feature complexity.

PROJECT WORK

HaloCheck | Developer | [Live](#)   2025
A WordPress-based website background verification platform that simplifies the candidate screening and hiring process for organizations.
- Built and maintained a scalable background verification system using WordPress and Elementor page builder, creating custom layouts and responsive designs for seamless candidate screening workflows.
- Contributed to the development of the HaloCheck platform, enhancing its functionality for users to verify and manage background checks seamlessly.
- Integrated features for employers to request, manage, and monitor background check results from candidates.
- Optimized platform layout and user experience across all devices using Elementor's responsive design tools, ensuring consistent functionality and visual appeal on desktop, tablet, and mobile platforms.
- Established efficient content management workflows within WordPress, enabling easy updates to verification processes, user guides, and platform documentation.

Verity Intelligence | Developer | [Live](#)   2025
A comprehensive WordPress-based background verification platform that streamlines candidate screening and hiring processes for organizations.
- Implemented comprehensive website optimization including speed enhancements, SEO best practices, and mobile responsiveness to maximize search visibility and user experience across all devices.
- Established flexible content management workflows enabling efficient updates to service information, case studies, company news, and thought leadership content through WordPress admin interface.
- Provided ongoing website maintenance including security updates, plugin management, and feature enhancements to ensure consistent performance and up-to-date functionality.

VeriSafe App | Developer | [Live](#) 2025

An internal ReactJS-based application for clients, providing background verification services.
- Implemented VeriSafe, Risk Check, and KYC features to enhance the verification process and ensure compliance.
- Handled integrations with Stripe and Billplz for secure payment processing within the app.
- Developed secure login and authentication features, allowing users to manage verification requests and track their statuses.
- Integrated real-time notifications to keep users updated on the status of background checks.

Capital Office UK | Developer | [Live](#) 2024

A Laravel and React application that manages the organization's sales, reports, documents and clients' accounts.
- Developed a user interface dashboard leveraging the capabilities of ArchitectUI.

Fetch Workpapers | Developer | [Live](#) 2023

A Laravel and PHP application that provides accountants with a transformative solution to simplify and automate their workpapers.
- Implemented a payment functionality utilizing Stripe, enhancing the fluidity of the transactional process for flawless and efficient payments.
- Developed an automated email system designed to promptly notify clients of significant account activities, ensuring timely communication and transparency regarding key transactions.
- Created a multiple customized command console that effectively reduced the coding workload.
- Developed the backend/API using Laravel following RESTful architecture and MVC architecture.

Elder Armor USA | Developer | [Live](#) 2023

A WordPress web application that sells an undergarment product online.
- Implemented a payment feature using the WooCommerce plugin.
- Utilized WooCommerce plugin for establishing a payment functionality.

Weby | Developer | [Frontend Code](#) | [Backend Code](#) 2023

A React on Rails application that allows users to schedule online appointments for their website design ideas.
- Developed a profile picture upload feature using Active Storage.
- Implemented an online appointment scheduling feature for users with admin management functionalities.
- Achieved a 98% test code coverage using RSpec and SimpleCov, ensuring code quality and reliability.
- Implemented user authentication, registration, and email verification using Bcrypt gem scalable to 1,000s of users per hour.

Banking App | Developer | [Code](#) 2023

A banking React application that allows an admin to oversee user accounts and facilitate account-to-account transactions.
- Implemented a feature that allows the admin to search for user details and their transactions.
- Developed an admin feature to manage user accounts and facilitate user transactions.
- Implemented a feature that enables users to perform deposits and withdrawals.

Slack App | Developer | [Code](#) 2023

A React application where registered users are able to send and receive messages and create channels.
- Allowed users to create accounts and sign in, where they have the ability to exchange messages with other users.
- Implemented 8 REST API requests for account creation, sign-in and message retrieval.
- Designed 6 front-end components using Javascript for users to send direct messages, create channels, and add users to channels.

EDUCATION

Full Stack Web Development, Avion School 2023
B.S. in Entrepreneurship, *De La Salle University Dasmariñas* 2019
